

Fuel Mix Disclosure information

By the 1st of October every year, Regent Gas is required to publish a statement that sets out the Electricity (Fuel Mix Disclosure) we have used to generate the electricity supplied to our customers, along with further details and other environmental information.

This statement is set out in accordance with The Electricity (Fuel Mix Disclosure) Regulations 2005, where we are obligated to provide our business electricity customers with details of the mix of fuels used to produce the electricity supplied to them.

The data has been calculated using official data provided by Elexon.

Below, you'll find a table detailing our Fuel Mix Disclosure information. The table features a breakdown of which fuels make up the electricity we supply to our customers, how our consumption compares to the UK average, and the environmental impact of the electricity we supply. By presenting this information in a table format, we hope to help our business electricity customers better understand where their power comes from.

For the period 1st April 2023 to 31st March 2024:

Energy Source	Regent Power	UK Average
Coal	1.40%	1.40%
Natural gas	40.70%	40.70%
Nuclear	17.70%	17.70%
Renewables	38.90%	38.90%
Other fuels	1.30%	1.30%
Total	100%	100%
CO2 emissions	175 g/kWh	175 g/kWh
High-level radioactive waste	0.0018 g/kWh	0.0018 g/kWh

Further details about the calculations can be obtained from Government on the following external link [here](#).
