

Energy and Emissions Report

Disclaimer

This policy is valid for all Regent Utilities businesses including Regent Utilities Ltd, Regent Gas Ltd, Regent Power Ltd and Energy Metering System (EMS).

Regent Utilities will use all reasonable, appropriate, practical, and cost-effective measures to protect its information systems and achieve its security objectives.

Report

In the financial year the group businesses used the following amounts of energy and corresponding CO2 emissions

Fuel & CO2 emissions from 1/4/2019 to 31/3/2020					
Fuel	Units	CO2 (Kg)	Offset CO2 Kg	Net	CO2
				(Kg)	
Gas (Kwh)	125,810	23,275	23,275	-	0
Electricity (Kwh)	259,139	22,123	0		22,123
Diesel (Litres)	10,223	26,723	0		26,723
Total CO2 Kg		72,120	23,275		48,845

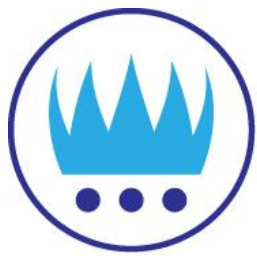

Average number of employees during the year is the most appropriate measure of energy intensity. Financial measure and other operational measures are more likely to fluctuate with a significant part of the fluctuation outside of our control

Energy Intensity Kg CO2 per employee		
Average No of Employees	CO2 Emissions (Kg)	Net CO2 Emissions (Kg)
24	3005.2	2035.2

Energy use covers the operations of office and warehouse premises and the installation, removal and maintenance of gas meters.

To reduce the impact of CO2 emissions we purchased green gas to offset emissions from our gas consumption of 23,275 Kg of CO2.

After year end, we replaced the heating and air conditioning system at Regent House. The new system will be more energy efficient and will only use electricity. Solar panels with a

capacity of 42.93 kWp were installed on part of the roof at Regent House. Also after year end, a warehouse was purchased for the operations of our metering business. Solar panels with a capacity of 26.3kWp have been installed and a combined heat and power system is due to be installed in the next few months.

We expect these energy saving measures to have some impact in FY2021 but a more significant impact in FY2022.
